

Nature Forum on Enhancing scientific research excellence by integrating sex and gender analysis

October 5, 2023 | Gangnam-gu, Seoul, Korea

Sex and gender are now recognized as crucial biological variables that exert significant influence on research outcomes, particularly in preclinical and clinical studies, and on clinical decision making. Bringing together researchers from a broad spectrum of scientific disciplines and key stakeholders from the funding and publishing landscape, this Nature Forum aims to increase awareness of sex and gender analyses, and will discuss their broader influence and integration in the basic life sciences, clinical science and data science, as well as the role of publishers in promoting best practices.
